

Guidelines for the description of the subject matter of the contract for technical consulting under the project implemented by the PNT Euro-Centrum in cooperation with the municipality of Ceadir-Lunga in Moldova:

1. construction of two demonstration photovoltaic installations: one on the roof of a building and the other in the form of a photovoltaic tree (to power, for example, phone chargers) to be sited in the locations indicated by the municipality of Ceadir-Lunga, Moldova,
2. both solar installations (max. power of 25 kWp) and their software will be designed using the know-how and experience of PNT Euro-Center,
3. both installations are to be equipped with a module to provide real-time data on energy production/consumption for the web and mobile application and their visualization on a monitor placed inside the city hall,
4. the power of the installation does not need to be matched to the current electricity consumption of the facility on the roof of which it will be installed,
5. the design of the installation, permits, purchase and delivery of the necessary equipment and installation will be carried out by the company selected through a tender issued by the municipality of Ceadir Lunga.
6. the Moldovan partner shall provide the complete installation with the necessary software for downloading real-time data on energy production/consumption for the web and mobile application, as well as equipment for visualizing the volume of production and consumption of energy produced (computer + screen).
